Education

Florida International University

Miami, FL

B.S. in Computer Science; GPA: 3.61

Jun. 2023 – May 2027 (Expected)

- Relevant Coursework: Data Structures, Systems Programming, Operating Systems, Database Management, Artificial Intelligence, Discrete Structures

Experience

Salesforce

May 2026 – Aug. 2026

Software Engineer Intern, Salesforce Spark Team

San Francisco, CA

- Cut Spark logging costs by shipping to production a log-search REST API that streams, decompresses, and greps gzipped logs from AWS S3, replacing the team's Splunk pipeline
- Enabled autonomous AI diagnosis of Spark job failures, removing manual triage steps, by exposing the log-search API as a Model Context Protocol (MCP) tool over an Envoy service-mesh mTLS connection
- Automated close to 40% of Spark application support tickets, freeing up roughly 15 hours/week for on-call engineers, by shipping a Claude Code plugin that collapsed a multi-tool Spark debugging setup into a single install, bundling 4 MCP servers and 7 skills for internal customers
- Delivered 20 merged pull requests totaling 7,400+ additions across two repositories, backed by 219+ unit and integration tests (Vitest, pytest, Jest), while hardening the API against path-traversal and shell-injection risks

Salesforce

Jun. 2025 – Aug. 2025

Software Engineer Intern

San Francisco, CA

- Shipped Codifica, an AI-powered in-browser code editor, from zero to a deployed full-stack PERN application in 10 weeks as 1 of 30 interns selected from a competitive applicant pool
- Enabled end-to-end code execution across 3+ programming languages with no local setup by engineering an in-browser IDE integrating Judge0 for sandboxed execution and CodeMirror for the editor UI
- Cut AI assistant response time by 35% by refining API call patterns and tightening prompt structure
- Closed accessibility gaps validated across 30+ real users by building a Gemini-powered multilingual tutor and running an iterative feedback loop

Projects

RepoAI | *React, TypeScript, FastAPI, OpenAI, Pinecone, Tree-sitter* | GitHub | Live Demo

- Replaced manual code archaeology with plain-English querying across entire GitHub repositories, cutting the time engineers spend reading through code by up to 50%, by building a retrieval-augmented generation (RAG) pipeline
- Enabled language-aware semantic retrieval at chunk-level granularity by parsing repositories with Tree-sitter, embedding chunks via the OpenAI API, and storing vectors in Pinecone
- Served queries end to end via a FastAPI backend (*/ingest*, */query*) with a React 19 + TypeScript frontend

CreatorsFIU | *React, TailwindCSS, Firebase, MongoDB* | GitHub

- Launched a peer-to-peer marketplace for FIU students at INIT Demo Day as 1 of 7 engineers in INIT FIU's cohort-based INIT Build program
- Increased user login speed by up to 30% by building Firebase-backed authentication with cross-device data sync, and developed the responsive React + TailwindCSS homepage
- Scoped and guided the team's development sprints by authoring 20+ user stories

Technical Skills

Languages: Java, Python, C, JavaScript, TypeScript, SQL (PostgreSQL), HTML/CSS

Frameworks & Libraries: React, Node.js, Express, FastAPI, TailwindCSS, Prisma, Firebase

Infrastructure & Tools: Kubernetes, Helm, Docker, AWS (S3), Apache Spark, REST APIs, Git, CI/CD, Service Mesh (Envoy/mTLS), Jest/Vitest/pytest

Concepts: Model Context Protocol (MCP), Distributed Systems, Autoscaling, RAG, Vector Databases (Pinecone), Agile/Scrum

Languages Spoken: English, Spanish (native)

Leadership & Activities

Computer Science Tutor, STARS FIU (Aug. 2025 – May 2026): tutored 500+ students; raised exam scores up to 25%

Director of Digital Media, INIT FIU (Dec. 2025 – Present): grew INIT FIU's Instagram account to 6,000+ followers by producing specialized photo and video content for the account's marketing

ColorStack Member | ShellHacks 2024 & 2025 Participant
